KIEL MARINE SCIENCES

INTEGRATED SCHOOL OF OCEAN SCIENCES

“MEET THE PROF.”

A Career in Science: The USA & Canada

27.06.13 | 13:15 - 14:30 h

Martin Tresguerres

Scripps Institution of Oceanography, San Diego
Assistant Professor, Marine Biology Research Division

What is it like to build a research group in a foreign country? What are differences in PhD programs in Canada and the US in comparison to those in Germany? If you are interested in these questions, come and join an informal discussion with two leading animal - and marine biologists.

Martin Tresguerres, born in Argentina, has recently started his own lab as an Assistant Professor at Scripps, San Diego (large image), studying coral and fish pH regulation processes. Dirk Weihrauch, a native of Northern Germany, has recently been tenured as an Associate Professor at the University of Manitoba in Winnipeg, studying marine animal organismic biology.

“Meet the prof” events are intended to network young researchers at all stages (Bachelors to PhD) with top-level international scientists visiting Kiel. They provide a platform for personal interactions with key players in science and an opportunity to gain insights into education and research activities, newly developing programmes as well as job opportunities.

The event is open to all interested participants.

Dirk Weihrauch

University of Manitoba, Canada
Associate Professor, Department of Biological Sciences

Both will talk to you about how they managed to achieve their career goals and how you could try to get a foot on the North American continent.

Venue: GEOMAR westshore building, lecture hall

Contact: Prof. Frank Melzner, GEOMAR
