

Public Lecture

# Comparative Policy Response and Adaptation to Climate Change and Sea Level Rise

17<sup>th</sup> September 2013 | 19:00 h

Location: Lecture Hall, Zoological Museum | Hegewischstraße 3, Kiel

---

“Environmental policy is always – and only - about social change based on human beliefs, values and perceptions. You are all part of that process, only a small part of which is actually producing science.”

---

Mike Orbach concentrates on applications of social science to environmental policy and management, marine fisheries and integrated coastal management, and public involvement in environmental policy.

In his public lecture he will discuss both the general dimensions of sea level rise and policy response, with examples from the U.S., Europe and Asia.
